### ***NSF-61 Certification***

**Fairhaven, MA, August 12, 2015**

Nye Lubricants Inc. is pleased to announce that we have received NSF-61 Certification for Potable Water Lubrication for Fluorocarbon Gel 880 and 885. This new certification now allows Nye to sell our products for commercial water treatment and drinking water for both hot and cold water applications.

This certification provides assurance to our customers that our products are safe to use in drinking water applications from source to tap. The testing done has determined what, if any, contaminants could possibly migrate or leach from our product into drinking water. This approval verifies that our lubricants are below the stringent levels set by the NSF, thus ensuring that drinking water is still safe for consumers.

Jay Galary, Nye's Engineering Development & Application Manager said, "After several years of development and testing, we are very happy to finally present two high performance, wide temperature capable synthetic lubricants designed for sealing, damping, and lubricating drinking water applications. With the NSF /ANSI 61 certification and NSF's Global Passport, we can offer our customers across the world assurance for their drinking water applications. "

Nye Lubricants, Inc. is a privately held formulator and manufacturer of high-quality synthetic oils, greases, specialty fluids, and index-matching optical gels. Founded in 1844, Nye services customers in a broad range of industries including the top 25 global automotive parts suppliers, the world's largest aerospace and defense contractors, name-brand appliance and power tool companies, preeminent medical device manufacturers, and several leading in-vacuum equipment producers. With 170 employees and 28 International Channel Partners on six continents, Nye is in business to redefine superior product performance, leveraging its technology, engineering expertise, and core competencies in synthetic lubricants to its customers' enduring benefit.
